SUMMARY

Data Analyst with expertise in end-to-end data lineage mapping, Source-to-Target (STT) analysis, and advanced time-series forecasting. Experienced in auditing complex enterprise metadata architectures for global banking programs and implementing patented machine learning architectures. Proficient in Python, SQL, and advanced Excel, with a strong background in data quality validation, statistical metrics, and automated reporting.

SKILLS

Data Analysis & Governance: Source-to-Target (STT) Analysis, Data Lineage Tracking, Metadata Auditing, Data Reconciliation, Quantitative Research

Tools & Languages: Python, SQL (PostgreSQL), Excel (Advanced), IBM Manta, Solidatus, Linux, Git, AWS Cloud

Statistical & ML Modeling: Time-Series Forecasting, Attention-Based Networks, Dynamic Time Warping (DTW), Data Transformations (RobustScaler)

EXPERIENCE

Perficient (Client: BNY Mellon)

Jun. 2025 – Present

Associate Technical Consultant – Data Lineage

Chennai, TN

- Managed end-to-end Data Lineage audits and RFIs for 50+ high-scale banking applications per quarter, systematically tracking Primary Data Elements (PDEs) to satisfy global regulatory compliance.
- Conducted deep-dive Source-to-Target (STT) analysis and data reconciliations, verifying that upstream production systems accurately map to downstream financial consumers.
- Engineered manual data mapping and metadata "stitching" sheets using IBM Manta to synchronize complex technical data pipelines with visual Solidatus reporting models.
- Audited backend metadata environments utilizing Linux terminal commands on Manta servers to trace structural data lineages and mitigate data-integrity gaps.
- Maintained high-volume delivery trackers and automated pipeline checklists, successfully meeting strict quarterly data attestation lifecycles.

Geojit Technologies Ltd

Jun. 2024 – Jul. 2024

Flutter Intern – Data Visualization & Product

Kochi, KL

- Conducted comprehensive data visualization research to map custom analytical charting libraries (Pie/Line charts) for active portfolio tracking within a flagship wealth management app.
- Collaborated with UI/UX designers to translate structured layout data into production-ready dashboard interfaces for user onboarding analytics.
- Evaluated feasibility profiles for embedding automated AI conversational agents to extract user analytics and drive app engagement metrics.

RESEARCH & PROJECTS

Air Quality Forecasting Using Attention Based Transformers | Patent Filed

Jan. 2025 – Apr. 2025

- Developed a patented Dual-Pathway Transformer Encoder model optimized for multivariate time-series forecasting across 8 concurrent environmental pollutant vectors.
- Engineered a data preprocessing pipeline using RobustScaler transformations and Huber Loss criteria, cutting predictive divergence by over 300k+ units via Dynamic Time Warping (DTW) evaluations.
- Designed a spatial-temporal fusion component that structured multidimensional dataset patches to isolate localized pollutant correlations within an optimized, hardware-efficient feature domain.

Decentralized Health Record Audit Architecture | Solidity, React, Node.js, Web3.js

Nov. 2023 – Dec. 2023

- Architected a tamper-proof health record ecosystem on Ethereum, utilizing Solidity smart contracts to guarantee transactional data integrity and immutability.
- Developed rule-based relational access-control tables allowing users to monitor, grant, or revoke metadata reading/writing permissions for third parties in real time.
- Managed structured data transactions between web-layer clients and historical ledger state-logs using explicit Web3 framework endpoints.

EDUCATION

Vellore Institute of Technology (VIT)	Sept. 2021 – June 2025
<i>B.Tech in Computer Science</i>	<i>GPA: 8.78/10</i>
Navy Children School, Kochi (CBSE Class 12)	2021
<i>Percentage: 96.8%</i>	

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (Feb 2024 – Feb 2027)
AWS Certified Cloud Practitioner (Jan 2024 – Feb 2027)
